SUBJECT: Technical Information Concerning Pump Station P-12 in
Sauget, Illinois

Mr. Walter Greathouse, Sr.
President, Board of Commissioners
Metro East Sanitary District
1800 Edison Avenue
Granite City, Illinois 62040

Dear Mr. Greathouse:

Enclosed is a technical report providing information about various facilities in the vicinity of subject pump station. This information should be useful in resolving issues concerning future flood control functions to be performed at that location. Conclusions are drawn concerning the functions that the pump station can now provide, and recommendations are offered concerning actions that might be taken toward resolving the issue of future usage of the pump station.

The technical information contained in this report is essentially the same as that in the earlier draft report; however, considerably more introductory information is provided, and the conclusions and recommendations have been more fully developed.

Sincerely,

Louis J. DiIodini Jr
Jack R. Niemi
Deputy District Engineer
for Project Management

Enclosure

MEMORANDUM FOR CELMS-ED-HQ (H. ^{H.M.}Martin)

SUBJECT: Sediment in North Discharge Tunnel, Madison Pump Station, Metro East Sanitation District.

Reference: ER 1165-2-132 Water Resource Policies and Authorities HAZARDOUS, TOXIC, AND RADIOACTIVE WASTE (HTRW) GUIDANCE FOR CIVIL WORKS PROJECTS.

1. To the best of my knowledge, following the procedures described below, it is believed that the sediment at the subject location is not hazardous and therefore should not be regulated under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) according to paragraph 4.a.(1) of referenced ER. The sediment is classified as a Special Waste and is regulated under a State program. Transport and landfill permits are required to properly dispose of this material. The requirements of 29 CFR 1910.120 should be followed to provide personnel protection for anyone who may come in contact with this material.

2. A preliminary investigation of the sediment at the subject location indicated the presence of controlled substances regulated under the Resource Conservation and Recovery Act (RCRA). Additional analysis required by RCRA to determine their Toxicity Characteristic was performed. The test method is described in 40 CFR 261 Appendix II and is titled Method 1311, Toxicity Characteristic Leaching Procedure (TCLP). Table 1 in 40 CFR 261.24 lists the Regulatory levels of contaminants for Toxicity Characteristic.

3. The sediment at subject location was re-sampled and the required TCLP analysis was performed. The contaminants present that are listed in Table 1 in 40 CFR 261.24 were found to be well below their respective regulatory level given in that table. Therefore it is believed that this material is not hazardous waste under RCRA.

4. There were contaminants detected in the sediment that are not regulated under RCRA. These are known as Poly Nuclear Aromatics (PNA's). Preliminary research of the various laws revealed the PNA's to be regulated in two conditions. If the PNA's are present in effluent discharges requiring a National Pollution Discharge Elimination System (NPDES) permit then it is regulated under the Clean Water Act. If the PNA's are present in a substance that is involved in a spill then it is regulated under the Reportable Quantities Section of CERCLA. It is believed that

2323001004

006464

because of the type of material and the site specific conditions at the subject location the sediment should not come under either Act. However this should be confirmed with Illinois Environmental Protection Agency

CASE NARRATIVE

VOLATILE FRACTION

Two (2) waste samples were received by ARDL on October 20, 1992, for VOA TCLP analysis by GC/MS. All analyses were performed according to low level protocol.

No other unusual problems were encountered during the sample analyses.

SEMIVOLATILE FRACTION

Two (2) waste samples were received by ARDL on October 20, 1992, for TCLP extraction and BNA analysis by GC/MS. The results were requested on a three day turnaround basis.

Surrogate recovery result failures were observed in the initial analyses and the reanalyses of both samples. Results of both evaluations have been reported.

No other unusual problems were encountered during testing.

TCLP PESTICIDE FRACTION

Two (2) TCLP extracts were received for Pesticide analysis. The TCLP extracts were extracted and concentrated per SW-846.

No additional problems were encountered in the analysis of these samples.

CASE NARRATIVE (Continued)

TCLP HERBICIDE FRACTION

Two (2) TCLP extracts were received for herbicide analysis. The TCLP extracts were extracted and concentrated per SW-846. The resulting extracts were then esterified with boron trifluoride to form methyl esters of the target compounds.

No additional problems were encountered in the analysis of these samples.

ORGANIC DATA REPORTING QUALIFIERS

The following organic data reporting qualifiers are used as required.

- U - Indicates compound was analyzed for but not detected. The sample quantitation limit must be corrected for dilution and for percent moisture.
- J - Indicates an estimated value. This flag is used either when estimating a concentration for tentatively identified compounds where a 1:1 response is assumed, or when the mass spectral data indicate the presence of a compound that meets the identification criteria but the result is less than the sample quantitation limit but greater than zero.
- N - Indicates presumptive evidence of a compound. This flag is only used for tentatively identified compounds, where the identification is based on a mass spectral library search. It is applied to all TIC results. For generic characterization of a TIC, such as chlorinated hydrocarbon, the N code is not used.

0
0
0
2
3
5
- P - This flag is used for a pesticide/Aroclor target analyte when there is greater than 25% difference for detected concentrations between the two GC columns (see Form X). The lower of the two values is reported on Form I and flagged with a "P".
 - C - This flag applies to pesticide results where the identification has been confirmed by GC/MS. If GC/MS confirmation was attempted but was unsuccessful, do not apply this flag, instead use a laboratory-defined flag.
 - B - This flag is used when the analyte is found in the blank as well as the sample. It indicates possible/probable blank contamination and warns the data user to take appropriate action. This flag must be used for a TIC as well as for a positively identified target compound.
 - E - This flag identifies compounds whose concentrations exceed the calibration range of the GC/MS instrument for that specific analysis. If one or more compounds have a response greater than full scale, except as noted in Exhibit D, the sample or extract must be diluted and re-analyzed according to the specifications in Exhibit D. All such compounds with a response greater than full scale should have the concentration flagged with an "E" on the Form 1 for the original analysis. If the dilution of the extract causes any compounds identified in the first analysis to be below the calibration range in the second analysis, then the results of both analyses shall be reported on separate copies of Form 1. The Form 1 for the diluted sample shall have the "DL" suffix appended to the sample number.
 - D - This flag identifies all compounds identified in an analysis at a secondary dilution factor. If a sample or extract is re-analyzed at a higher dilution factor, as in the "E" flag above, the "DL" suffix is appended to the sample number on the Form 1 for the diluted sample, and all concentration values reported on that Form 1 are flagged with the "D" flag.

HERBICIDE ANALYSIS

Customer Sample No.

MAD-PSIB

Lab Name: ARDL, Inc.
 Lab Code: _____

Contract: METRO EAST
 Case No.: 8013 SAS No.: _____ SDG No.: _____

Matrix (soil/water) : TCLP
 Sample (wt/vol) : 900 (g/mL) mL
 Level (low/med) : ---
 % Moisture (not dec) : ---
 Extraction (Sepf/Conc/Sonc) : SEPF
 GPC Cleanup (Y/N) : N pH: ---

Lab Sample ID : 8013-2
 Lab File ID :
 Date Received : 10/20/92
 Date Extracted : 10/22/92
 Date Analyzed : 10/23/92
 Dilution Factor : 1.0

Cas No.	Compound	Concentration Units:	
		(ug/L or ug/Kg)	ug/L Q
94-73-7	2,4-D	13	U
93-72-1	Silvex	1.9	U
